

Project 4 Overview

Project Objective: Build a basic reusable library using Python methods learned in class.

Requirements:

Incorporate the following:

- 5 Classes
- Data Object
- Minimum of 1 Getter and Setter
- Display proper example of inheritance
- Must not contain errors

NOTE: This was an intro to Python class. We had 5 days to learn what we needed and apply it to the project to hand in. I used Google App Engine Launcher for testing (hence a slightly older version of Python used) and the PyCharm Python editor.
