Project 2 Overview

Project Objective: Create a fictional website that implements HTML5 Canvas, Modernizr.js, an animated chart/graph, and an image gallery with choice of jQuery plugin. Responsiveness is not required.

Time allotted: 2 days to research how to use HTML5 Canvas, Modernizr.js, and using animated charts and 2 days to apply research and build website with required items.

Requirements:

Incorporate the following:

- HTML5 Canvas tag (any use is fine)
- Animated Chart
- Create an image gallery and include choice of jQuery plugin

NOTE: Design, content and responsiveness was not a focus. We were required to try our best with functionality on new techniques with very limited time on research and delivery. I used the Bootstrap framework.
