Project 5 Overview

Project Objective: Build a dynamic site using Python methods learned in class.
Requirements:
> Incorporate the following:
> - 8 Classes
> - Data Object
> - Minimum of 2 Getters and Setters
> - Display proper example of inheritance
> - Must contain an event
> - Must display Encapsulation
> - Must not contain errors

NOTE: This was an intro to Python class. We had 5 days to learn what we needed and apply it to the project to hand in. I used Google App Engine Launcher for testing (hence a slightly older version of Python used) and the PyCharm Python editor.
I commented like a champ in this class!
